

NEW

JACOBUS[®] ADJUSTABLE

by Maid-O'-Mist[®]

Ease in balancing steam heating systems is a twist away.

A single orifice that will adjust to allow for seamless system balancing. Adjusts to all 5 current Jacobus sizes.

The Jacobus[®] adjustable orifice cap will convert existing vents, or can be ordered on new vents, to give the user the ability to adjust on the fly when balancing their steam heating system.

This item can replace the need for ordering multiple sized vents and carrying additional stock.

Will reduce the clutter in your shop and truck of unneeded orifices.

Allow for tool free adjustments of the vent orifices.

Good for all straight, angle and main vent types.

To convert existing vents:

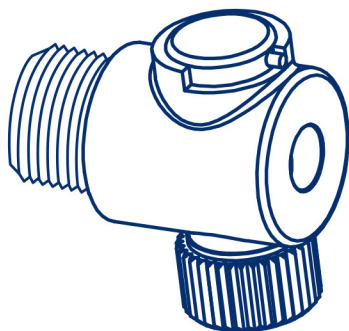

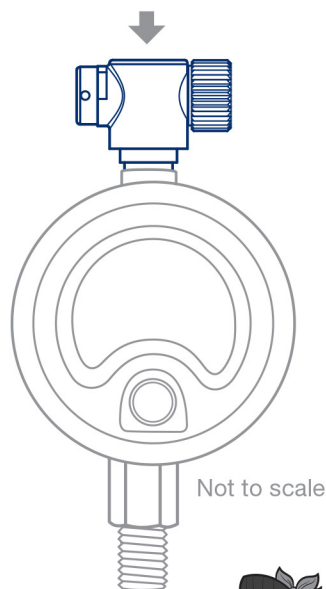

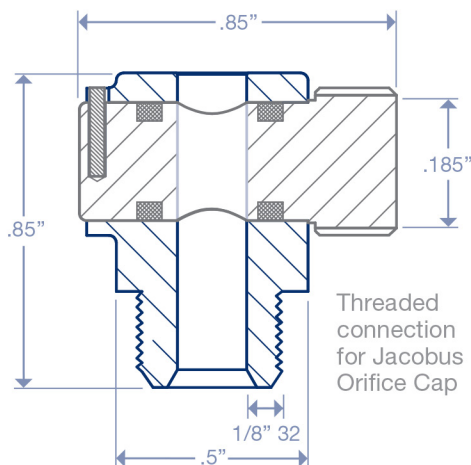

Order the #JACADJ and note 'cap only' on the PO.

Then unscrew the existing cap, and replace it with the new Jacobus adjustable. Dial in the opening size either by sight, or the use of the metered markings on the barrel of the vent.

To get Jacobus adjustable orifice caps on your new vents:

Order part number #JACADJ with your PO.

We will add them to the box for installation in the field.
